Welcome to *Stereoscopy.com - The World of 3D-Imaging*, your one stop information source about the fascinating world of 3D Photography (Stereo Photography) and all other aspects of 3D ("stereoscopic") imaging. For almost 15 years, we cater for 3D-aficionados around the world and have grown to the world's largest website fully devoted to true stereoscopic images.

## 3D and Stereoscopy - aren't those the same?

Perspective is often confused with 3D - which is not quite true, because the third dimension (Depth) is only "simulated". Therefore, 2½D would be a more appropriate expression. Stereoscopic imaging (or "real 3D"), however, requires a minimum of two pictures, simulating our two eyes. This can either be accomplished by using traditional photography (stereo photography), computers (for example Virtual Reality) or Lasers (Holography).

3D-Images can either be displayed as stereo pairs in a 3D-viewer (for slides or prints), or on a computer screen. Other formats include anaglyph pictures (requiring red-green or red-blue 3D-Glasses) and digital stereo projection (either with "passive" polarized 3D glasses or with "active" LCD Shutter glasses).

*Stereoscopy.com* provides information about stereoscopic imaging for both amateurs and professionals.

You have never tried to create 3D pictures? No problem: it's simple and we show you [how to get started!](#)

You are looking for 3D equipment, literature or services? Our [partners](#) offer what you need!

There is also a variety of [3D Clubs](#) providing a cozy home for 3D enthusiasts.

*Stereoscopy.com* is the place to look for information about 3D! Please come back again regularly as we are adding more exciting things all the time!

 A welcome to our latest Partners:

We are offering a great variety of services for your information, reference and pleasure. Please have a look at the [Services page](#).

If you can't find what you are looking for, or wish to contribute some information, please [let us know!](#)
